

Ajo Wijaja

Network & Cloud Network Engineer

Based in Indonesia · Any time zone · Open to remote & international roles

ajowijaja@gmail.com · [\[PLACEHOLDER: LinkedIn URL, e.g. linkedin.com/in/your-name\]](#) · cheafver.github.io

SUMMARY

Network engineer at a top-tier Indonesian bank since 2022, and cloud network engineer in parallel since 2025, designing and implementing on AWS and implementing on GCP. Works across hybrid and multi-cloud networking for active-active banking workloads spanning on-prem data centers, AWS, and GCP. AWS Advanced Networking Specialty certified. Looking for a remote Cloud Network Engineer or Cloud Network Specialist role.

CERTIFICATIONS

- AWS Certified Advanced Networking – Specialty · Aug 2026 (valid to Aug 2029) · [\[PLACEHOLDER: Credly link or credential ID\]](#)
- AWS Certified Solutions Architect – Associate · Feb 2026 (valid to Feb 2029) · [\[PLACEHOLDER: Credly link or credential ID\]](#)
- Cisco Certified Network Associate (CCNA) · May 2024 (valid to May 2027) · [\[PLACEHOLDER: Credly link or credential ID\]](#)
- AWS Application Networking – Demonstrated (hands-on microcredential) · Aug 2026 (valid to Aug 2027) · [\[PLACEHOLDER: Credly link\]](#)

EXPERIENCE

Network & Cloud Network Engineer

Top-tier Indonesian bank · 2022 – Present · [\[PLACEHOLDER: city, Indonesia, or delete\]](#)

Cloud network architecture and engineering (AWS, GCP), in parallel since 2025

- Hybrid multi-cloud banking network (details under NDA): designed and implemented the AWS network, and implemented the GCP network, so mobile and corporate banking workloads run active-active across on-prem data centers, AWS, and GCP.
- Implemented hybrid connectivity with AWS Direct Connect and Google Cloud Interconnect between on-prem data centers and both clouds.
- Implemented VPCs, DNS, and load balancers on both clouds, including intra- and inter-VPC traffic flows and ingress/egress flows.
- Delivered an environment where workloads scale up and down on cloud and dev environments can be provisioned and scaled as needed.

Network engineering (on-prem), 2022 – Present

- [\[PLACEHOLDER: 1–2 lines on your day-to-day on-prem network scope, e.g. device types, changes, incident handling; no numbers unless real\]](#)
- Network observability pipeline (internal tool, private code): built a Python pipeline that ingests ping data and raw SolarWinds (SQL Server) data into a database and computes the four golden signals, with Grafana dashboards and alerting for the on-prem network.

CORE SKILLS

- **Cloud networking:** AWS, GCP, AWS Direct Connect, Google Cloud Interconnect, VPC, intra- and inter-VPC traffic flows, DNS, load balancers, hybrid and multi-cloud connectivity
- **Network engineering:** On-prem data center networking, Cisco (CCNA), ingress/egress traffic flows
- **Automation & observability:** Python, SQL Server, SolarWinds, Grafana, alerting, four golden signals (latency, traffic, errors, saturation)
- [\[PLACEHOLDER: other tools you use daily and are happy to be interviewed on, or delete this line\]](#)
